

School Grounds Site Survey

The aim of this survey is to identify possible places for a new garden to be developed within the school grounds. It will be a **SUSTAINABLE** garden, which means that it will be natural, environmentally friendly and aim to attract wildlife. It will also be accessible to all members of the school community, and will use few resources (e.g. electricity, water, building materials) in its building and maintenance. The garden will measure 15m by 30m. We will survey four sites around the school grounds and you will have to decide how suitable each site is. Some of the categories that would make a suitable site are given below, with space for you to add some of your own.

WHAT TO DO: Complete the table by giving each site a mark out of 10 for each of the criteria, and mark each site on your map.

	SITE A	SITE B	SITE C	SITE D
The site is big enough for a garden 15 x 30 m.				
The site allows access for all members of the school community.				
The site is peaceful so people can relax and enjoy their break time.				
The site will attract wildlife because it is sheltered and will not be disturbed.				
The site will not cost too much to change as there will not be much digging, etc. to do.
