

Using Google Chart Generator <http://dexautomation.com/googlechartgenerator.php>

Google Chart Generator is easier to use when viewed 'full screen'.

Bar Chart – in this example, students observed people in a location and counted the number of people there for business, shopping or as tourists (based on their attire!)

1. The chart title is typed here and the font size and colour set

2. The chart background colour can be blank, solid colour or striped

3. Type the labels for each category here

4. Enter the data with commas and click 'Add'

5. Add a key and colour here.

6. Generate the chart by clicking here

7. This is the URL. Copy and paste this into Google Maps as an image or place mark

Dataset	Legend	Color
45, 23, 67	Location 1	0000FF

Visitor types

Visitor types	Count
Business	33.50
Shopping	23.00
Tourist	67.00
